SUMMARY

Economic Informatics student at ASE Bucharest who builds data pipelines in Python and SQL and full-stack apps in React and Supabase. Won two hackathons in 2026: SmartHack (R Systems challenge) and the Veridion Challenge at VibeHack. Looking for a software engineering internship.

EXPERIENCE

Frontend Developer · Sindicatul Studenților din Cibernetică (SISC) — Nov 2025 – Present

- Build and maintain UI components in React, JavaScript and HTML/CSS for internal SISC projects, using reusable component patterns.
- Plan features end to end with a small team and resolve implementation issues before release.

Data Automation Practicum · Procter & Gamble Academic Program — Mar 2026 – Apr 2026

- Automated repetitive reporting with Python and SQL scripts that clean, transform and aggregate operational datasets, cutting manual processing time.
- Applied database querying and transformation techniques to make operational reports more consistent and reliable.

HACKATHON WINS

Pandora, a home network security check · SmartHack 2026 — Nov 2026

Winner R Systems challenge, “Secure Networks, Simply Explained” · Python, FastAPI, nmap, React, TypeScript, Azure

- Built with my team a tool that finds the devices and open ports on a home network, explains each risk in plain Romanian and English, and proves every fix with a re-scan.
- Co-owned the scanner and rules engine: deterministic findings and scores with no AI in the decision path, matching the organisers' validation set exactly (24/24 findings, 8/8 scores).
- Built the before/after comparison that never reports a false fix, the cleaning of untrusted text sent by devices, and the CI pipeline (tests on Linux and Windows, golden-file comparison, secret scanning).

Company ranking engine · VibeHack 2026 — 2026

1st place Veridion Challenge · Python, embeddings, LLM · github.com/X3Raz0R/Verid

- Designed a company-ranking and qualification system that matches complex user queries against a company database with hybrid retrieval: structured filtering, embedding similarity search and selective LLM reasoning.
- Cut unnecessary LLM calls through pre-filtering and ranking heuristics, improving speed and cost while scoring on NAICS classification, business model and geographic fit.

PROJECTS

Macro Tracker App · React, Supabase — Google Play (testing)

- Built a mobile app for calorie and macro tracking, with real-time tracking and personalised dashboards.
- Integrated external nutrition APIs for detailed food and macro data; live on Google Play in testing.

EDUCATION

B.Sc. Economic Informatics · Bucharest University of Economic Studies (ASE) — 2024 – 2027

Faculty of Cybernetics, Statistics and Economic Informatics

High School Diploma · Dante Alighieri High School

SKILLS

Languages	Python, SQL, JavaScript, C#, Java, C++, Bash
Frameworks and tools	React, Node.js, Supabase, REST APIs, relational databases, Docker, Linux, Git, GitHub
Certificates	Database Design and Programming with SQL (Oracle Academy), ECDL
Spoken languages	Romanian (native), English (advanced)
